

# Fundamentos de Aprendizaje de Máquina

PhD Jorge Rudas

# Reglas del curso

- Asistencia
- Celular
- Plagio
- Uso de herramientas de IA Generativa
- Fechas de entrega
- Calificaciones

# Pre requisitos del curso

- Fundamentos sólidos de programación orientada a objetos
- Fundamentos de uso de lenguaje de programación Python 3.x
- Fundamentos de Álgebra Lineal y Cálculo Diferencial
- Fundamentos de manejo de datos en Python
  - Pandas
  - Numpy
- **Herramientas:**
  - GitHub
  - CodeLabs
  - Latex → OverLeaf

**Que es la inteligencia artificial?**

**Que es el aprendizaje de máquina?**

*“Artificial intelligence (AI) is a field of study that involves creating machines that can learn, reason, and act independently. AI systems can perform tasks that usually require human intelligence, such as problem-solving, decision-making, and learning.”*

**Google IA team**

*“Machine Learning is a system that gradually learns how to make useful predictions by studying lots of data to discover connections and correlations among them”*

**Google IA team**

ML is the process which a set of **data** elements are used for **training** a piece of software, called a **model**, to make useful **predictions** or generate content from data.

Given: task description, data, model  
class, loss objective

# Una mala noticia!

Given: task description, data, model class, loss objective

Machine Learning  
Courses

training data sources

model classes

pre-trained model

fine-tuning data

Task: ?? , Loss: ??

target task data

trained model

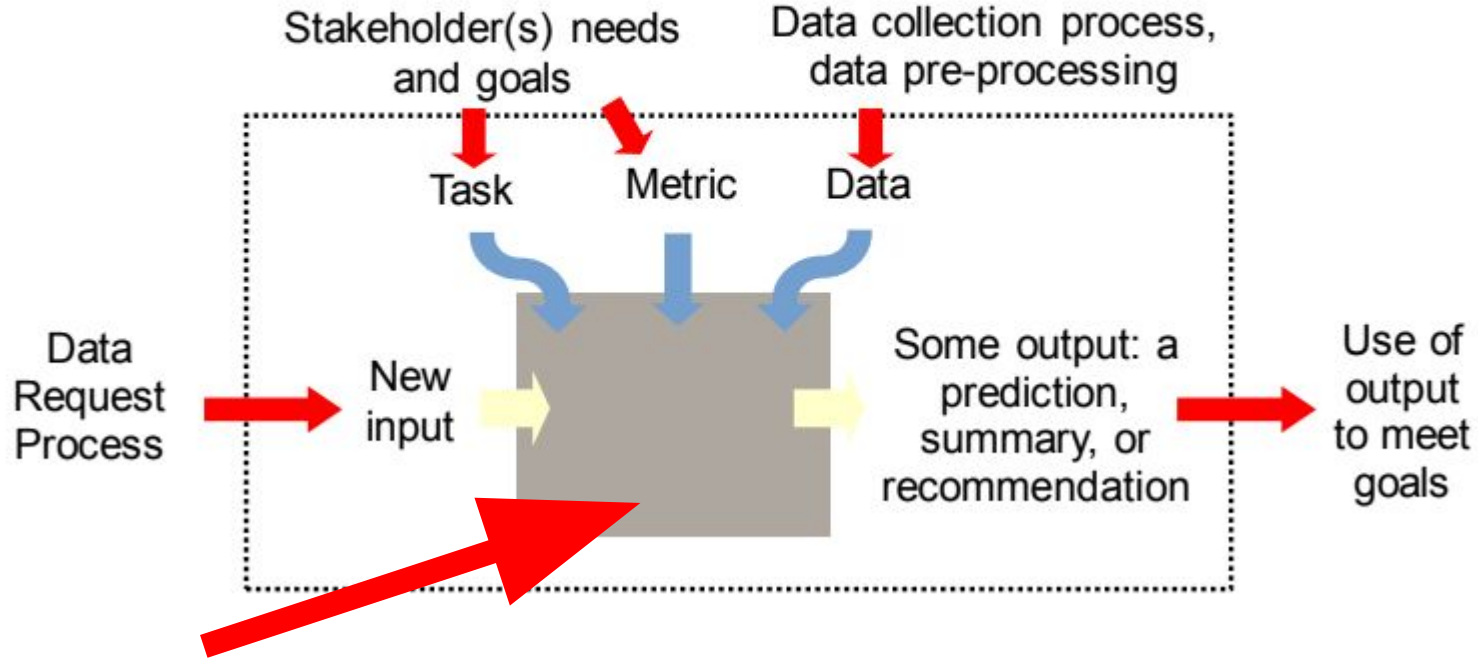

Machine Learning  
in the 'wild'

# Una buena noticia!

The same fundamental principles we will learn in this class, can be re-used and extended to tackle "ML in the Wild" too

# High-Level Setup

**Nunca pierdas de vista esta  
visión general**

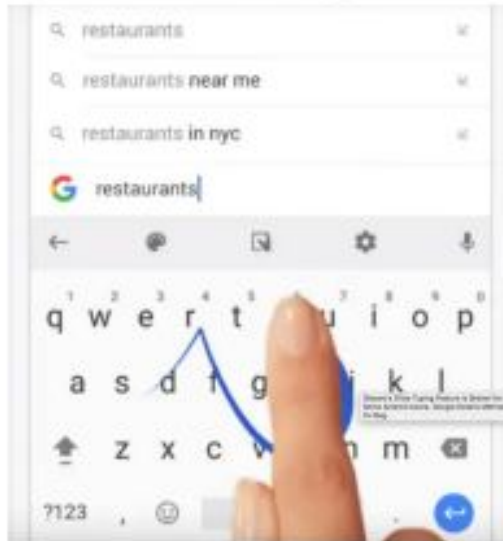

**(por muy ingeniero que te vas a  
convertir!)**

# Example # 1

Input → Data?

Training?  
Model?

Output → Prediction

Android Glide Typing

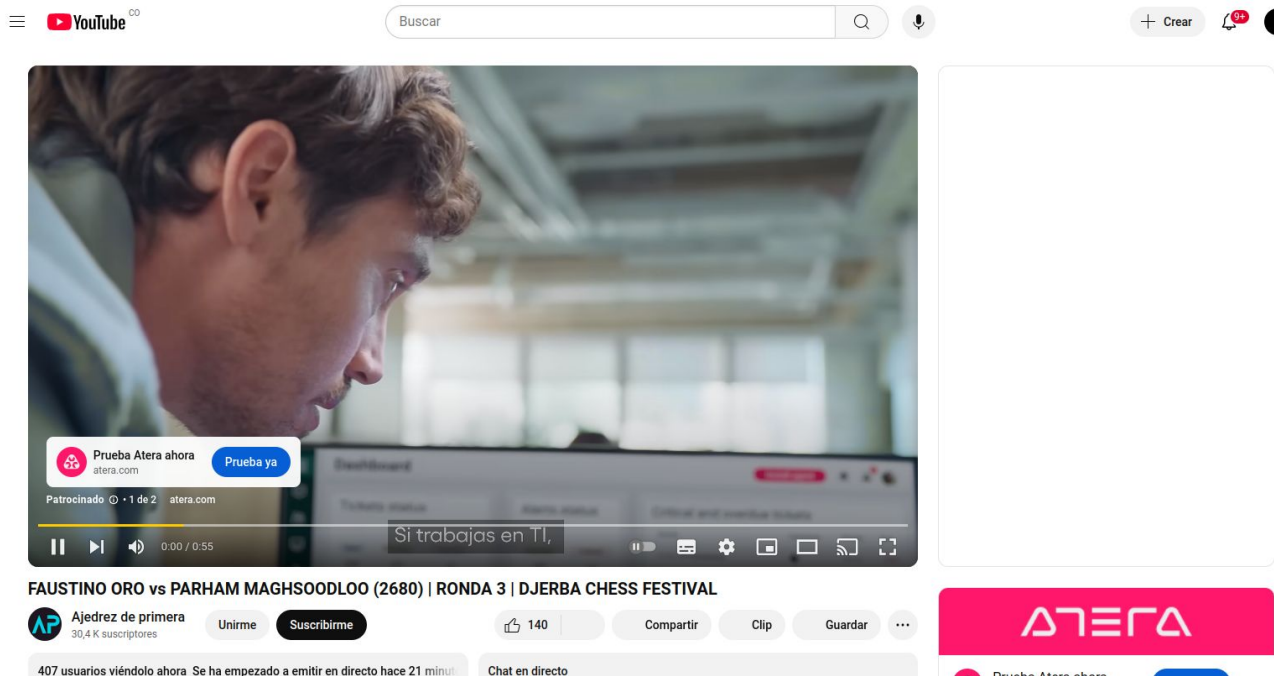

iOS QuickPath

# Example # 2

Input → Data?

Training?  
Model?

Output → Prediction

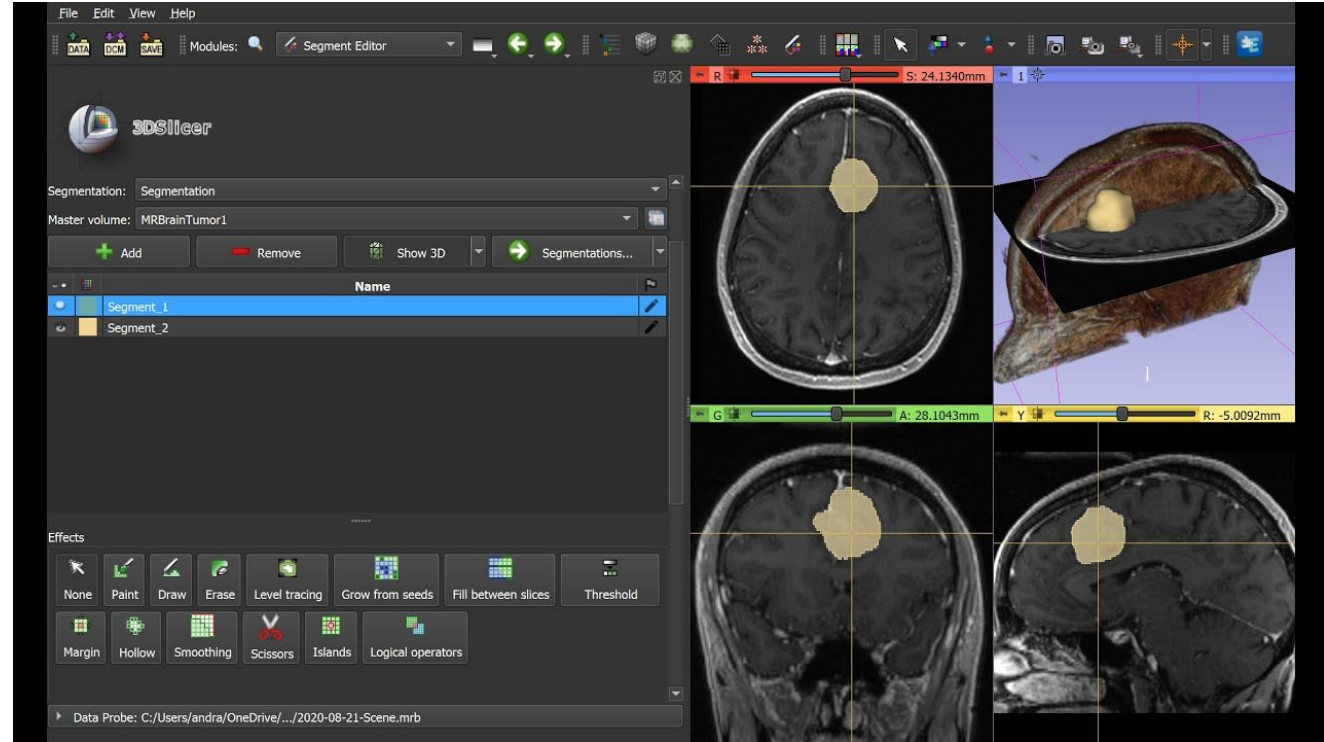

# Example # 3

Input → Data?

Training?  
Model?

Output → Prediction

## Example # 4

Input → Data?

Training?  
Model?

Output → Prediction

# Example # 5

Input → Data?

Training?  
Model?

Output → Prediction

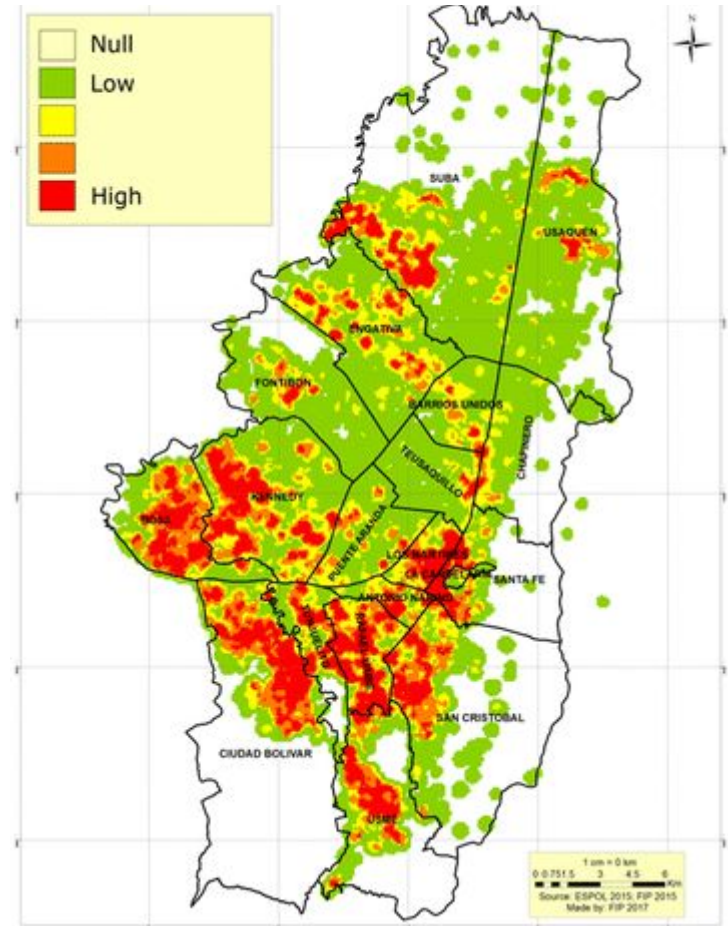

## Example # 6

Input → Data?

Training?  
Model?

Output → Prediction

- **Unsupervised learning**
- **Supervised learning**
  - Probabilistic
  - Non-Probabilistic
  - Reinforcement learning
  - Generative AI

***“Supervised learning** models can make predictions after seeing lots of data with the correct answers and then discovering the connections between the elements in the data that produce the correct answers. This is like a student learning new material by studying old exams that contain both questions and answers. Once the student has trained on enough old exams, the student is well prepared to take a new exam. These ML systems are "supervised" in the sense that a human gives the ML system data with the known correct results”*

**Google AI Team**

# Taller individual # 1a

Cree un Jupyter Notebook con una rutina **abierta** en python para calcular el área de la mancha

[https://profecaevp.wordpress.com/wp-content/uploads/2015/04/mancha\\_png\\_by\\_ona\\_smile-d5tmk7x.png](https://profecaevp.wordpress.com/wp-content/uploads/2015/04/mancha_png_by_ona_smile-d5tmk7x.png)

# Taller individual # 1b

[https://profecaevp.wordpress.com/wp-content/uploads/2015/04/mancha\\_png\\_by\\_ona\\_smile-d5tmk7x.png](https://profecaevp.wordpress.com/wp-content/uploads/2015/04/mancha_png_by_ona_smile-d5tmk7x.png)

Cree un Jupyter Notebook con una rutina en python para calcular el área de la mancha siguiendo la guía a continuación

## Algoritmo

**Paso 1** → Defina  $n$  puntos bidimensionales aleatorios distribuidos de forma uniforme sobre la imagen.  $w$  será el ancho y  $h$  el alto de la imagen

**Paso 2** → Determine la variable  $p_{dentro}$  (número de puntos aleatorios que están dentro de la mancha)

**Paso 3** → 
$$\text{Área} = \lim_{n \rightarrow \infty} \frac{p_{dentro}}{n} wh$$

# Taller grupal # 2

## Dataset

[https://www.datos.gov.co/Comercio-Industria-y-Turismo/Personas-Naturales-Jur-dicas-y-Establecimientos-en/jxfg-er2i/about\\_data](https://www.datos.gov.co/Comercio-Industria-y-Turismo/Personas-Naturales-Jur-dicas-y-Establecimientos-en/jxfg-er2i/about_data)

- Defina una métrica de calidad de datos
- Defina un algoritmo para evaluar la calidad de sus datos
- Defina un algoritmo para preprocesar sus datos
  - Datos vacíos
  - Datos duplicados
  - Datos atípicos o anómalos
  - Normalización de datos
  - Gestión de datos categóricos

Plan for today (08/27/2018)

***“Unsupervised learning** models make predictions by being given data that does not contain any correct answers. An unsupervised learning model's goal is to identify meaningful patterns among the data. In other words, the model has no hints on how to categorize each piece of data, but instead it must infer its own rules.”*
